

WOON (JEAN) TANG

(650) 664-7360 | jean.tang.careers@gmail.com | linkedin.com/in/wjeen | SF Bay Area, CA

PROFESSIONAL SUMMARY

Software Engineer with extensive experience architecting and shipping scalable enterprise web applications across the full technology stack. Passionate about building intuitive user experiences, reusable components, and cloud-native applications while maintaining high standards for code quality, testing, and security. Thrive in fast-paced, collaborative environments by taking ownership of complex challenges, driving continuous improvement, and delivering scalable, customer-focused solutions.

SKILLS

Data & AI: AI-assisted coding tools, Prompt Engineering, Python (Pandas, NumPy, Scikit-learn), LangChain, RAG, MCP

Frontend: Angular, React, HTML5, CSS3, SASS, D3.js, amCharts, TypeScript, JavaScript (ES2024), Responsive Web Design, Performance Optimization

Cloud & Infrastructure: AWS, Docker, Kubernetes, Jenkins, Git, GitHub, CI/CD, Splunk

Backend: Node.js, Python, Java, REST APIs, GraphQL, Microservices, Go

Software Engineering: Frontend Architecture, Component-Based Design, System Design, Code Reviews, Unit Testing, Integration Testing, Agile, SDLC

PROJECTS

UCSC Extension, Data Analytics & Data Science Portfolio

Designed end-to-end Python predictive pipelines using pandas, NumPy, and Scikit-Learn to automate data preprocessing, feature engineering, and missing-value imputation, while evaluating and tuning advanced ensemble classifiers to maximize validation accuracy. ([Project1](#), [Project2](#)) Utilized R to conduct exploratory statistical discovery, identifying underlying data distributions, detecting multicollinearity, and isolating outliers. Formulated data-driven hypotheses and performed regression diagnostics to evaluate model fit. Completed hands-on coursework and applied projects in Python for Machine Learning, Introduction to Machine Learning, Data Analysis, Introduction, Relational Database Design and SQL Programming.

WORK EXPERIENCE

Dell Technologies

April 2022 - Feb 2025

Principal Software Engineer

Santa Clara, CA

- Led the delivery of multiple high priority Dell PowerProtect Data Domain Management Center (DDMC) initiatives, enabling hyperscale data protection across hybrid cloud and on-premise environments.
- Developed micro-frontend applications using Angular, TypeScript, HTML5, CSS, and go, emphasizing reusable components for micro frontend applications, improving responsive user experiences, accessibility, and maintainability.
- Built scalable mid-tier architecture and REST APIs using Java, Go, and GWT, ensuring low latency and maximum data reliability.
- Packaged and maintained containerized services using Docker and Kubernetes within established CI/CD and cloud deployment workflows.
- Leveraged AI-assisted coding tools across daily workflows to accelerate implementation, assist with refactoring, generate unit tests, improve code quality, and streamline code reviews.

Dell Technologies

April 2019 - April 2022

Senior Software Engineer

Santa Clara, CA

- Delivered scalable full-stack web applications using Angular, TypeScript, Java, and SQL databases, expanding system capacity and supporting mission-critical enterprise workflows.
- Refactored legacy codebases and contributed core components to Dell's internal library framework, cutting technical debt, eliminating duplicate code across teams, and significantly reducing frontend release cycles.
- Aligned closely with product and engineering stakeholders to dynamically prioritize features and manage cross-team dependencies, ensuring predictable milestone releases.
- Championed engineering best practices through structured code reviews and CI/CD automated testing, resulting in a 20% decrease in post-deployment bugs and reduced patch cycles.

Support.com

July 2018 - April 2019

Full Stack Web Application Engineer

Sunnyvale, CA

- Engineered full-stack features using React, Node.js, JavaScript, and AngularJS, achieving a 25% increase in page rendering speed and significantly enhancing mobile responsiveness across devices.
- Integrated high-throughput REST APIs with client-side components, optimizing asynchronous data fetching to enhance overall application responsiveness.

- Optimized responsive layouts and core rendering pipelines across desktop and mobile devices, achieving 99% cross-platform compatibility and boosting mobile performance by 30%.

HyperNova

June 2017 - July 2018

Software Engineer (Contractor)

Santa Clara, CA

- Engineered key installation, orchestration, and monitoring modules for a flagship network virtualization platform using Angular, Docker, and Kubernetes, significantly improving system throughput and operational stability.
- Engineered a scalable page schema to streamline application workflows and navigation, significantly improving user retention and cross-platform user adoption.
- Built interactive telemetry dashboards and data visualization tools with D3.js, providing clear visibility into distributed system health and accelerating incident triage for engineering teams.

Automatic Data Processing

Nov 2016 - June 2017

Associate App Developer

Pleasanton, CA

- Developed enterprise workforce management applications using Java, AngularJS, REST APIs, and SQL databases, enhancing data accuracy and operational stability for end users.
- Owned end-to-end feature delivery across the full SDLC, spanning requirements analysis, implementation, automated testing, deployment, and production support.
- Expanded automated test coverage and resolved high-priority escalations during production support, driving down post-release defects and speeding up turnaround times for critical fixes.

Sqor Sports

Feb 2016 - June 2016

Data Visualization Web Developer

San Francisco, CA

- Accelerated Shopify e-commerce performance and user engagement by 25% through targeted UI enhancements and data-driven A/B testing.
- Boosted sales by 15% and session duration by 20% by engineering and launching a real-time trending feed to surface live sports content.

EDUCATION

M.S., Computer Engineering [Santa Clara University, CA](#)

M.S., Actuarial Science [Cass Business School, London](#)

Certificate in Data Science and Data Analytics [UCSC Extension, CA](#)

Expected Oct 2026
